

Where would you publish this?

Joseph Reibenspies (j-reibenspies@tamu.edu)

So your structure is as ugly as a mud fence after a hard rain. Even if your structure is ugly and it passes the smell test, it should be published. The question is where? This brief talk will compare median R factors (CSD 2018) for structures taken from high, medium and low impact journals, for 2017, and pose the question, is it the story or the structure that makes or breaks a good paper. The author suggests that with a good story you can publish and ugly (not smelly) structure anywhere you want.
