

Accurate computation of the rotation matrices. Errata

Jorge Navaza*

ER 180 du CNRS, Centre Pharmaceutique, 92290 Chatenay Malabry, France. *Correspondence e-mail: jorge.navaza.estevez@gmail.com

Two equations in the article by Navaza [*Acta Cryst.* (1990), **A46**, 619–620] are corrected.

Keywords: rotation matrices; irreducible representations; fast rotation function

Equations (3) and (5) in Navaza (1990) are corrected. Equation (3) should read

$$d_{mj}^j(\beta) = \{(2j)!/[j+m]!(j-m)!\}^{1/2} \times \sin(\beta/2)^{j-m} \cos(\beta/2)^{j+m} \quad (3)$$

and equation (5) should read

$$[(j-n+1)(j+n)]^{1/2} d_{m,n-1}^j(\beta) + [(j+n+1)(j-n)]^{1/2} d_{m,n+1}^j(\beta) + 2(m-n \cos \beta) \sin^{-1}(\beta) d_{m,n}^j(\beta) = 0. \quad (5)$$
