In the molecule of the title compound, [InCl$_3$(C$_{12}$H$_{12}$N$_2$)-(C$_2$H$_6$OS)], the In^{III} atom is six-coordinated in a distorted octahedral configuration by two N atoms from the chelating 4,4'-dimethyl-2,2'-bipyridine ligand, one O atom from dimethyl sulfoxide and three Cl atoms. In the crystal structure, intermolecular C—H···Cl hydrogen bonds link the molecules into centrosymmetric dimers.

Trichlorido(4,4′-dimethyl-2,2′-bipyridine-*κ²N,N′*)(dimethyl sulfoxide-*κO*)indium(III)

Roya Ahmadi, Khadijeh Kalateh, Anita Abedi, Vahid Amani and Hamid Reza Khavasi

S1. Comment

Recently, we reported the syntheses and crystal structures of [Zn(5,5′-dmbpy)Cl₂], (II), (Khalighi *et al.*, 2008), [Zn(6-mbpy)Cl₂], (III), (Ahmadi, Kalateh *et al.*, 2008), [Cd(5,5′-dmbpy)(*μ*-Cl)₂]ₙ, (IV), (Ahmadi, Khalighi *et al.*, 2008), (Hg(4,4′-dmbpy)I₂], (V), (Yousefi, Tadayon Pour *et al.*, 2008) and [Cu(5,5′-dcbpy)(en)(H₂O)₂].2.5H₂O, (VI), (Yousefi, Khalighi *et al.*, 2008) [where 5,5′-dmbpy is 5,5′-dimethyl-2,2′-bipyridine, 6-mbpy is 6-methyl-2,2′-bipyridine, 4,4′-dmbpy is 4,4′-dimethyl-2,2′-bipyridine, 5,5′-dcbpy is 2,2′-bipyridine-5,5′-dicarboxylate and en is ethylenediamine]. We have also reported the synthesis and crystal structures of iron(III) complexes of [Fe(bipy)Cl₃(DMSO)], (VII) and [Fe(phen)Cl₃(DMSO)], (VIII), (Amani *et al.*, 2007) and [Fe(phen)Cl₃(CH₃OH)].CH₃OH, (IX), (Khavasi *et al.*, 2007) [where bipy is 2,2′-bipyridine, DMSO is dimethyl sulfoxide and phen is 1,10-phenanthroline]. There are several In^{III} complexes, with formula, [In(N—N)Cl₃(*L*)], (*L* = DMSO, H₂O and EtOH), such as [In(bipy)Cl₃(H₂O)], (X), [In(bipy)Cl₃(EtOH)], (XI) and [In(bipy)Cl₃(H₂O)].H₂O, (XII), (Malyarick *et al.*, 1992), [In(phen)Cl₃(DMSO)], (XIII), (Nan *et al.*, 1987), [In(phen)Cl₃(H₂O)], (XIV) and [In(phen)Cl₃(EtOH)].EtOH, (XV), (Ilyukhin & Malyarick, 1994) have been synthesized and characterized by single-crystal X-ray diffraction methods. We report herein the synthesis and crystal structure of the title compound, (I).

In the title compound, (Fig. 1), the In^{III} atom is six-coordinated in a distorted octahedral configuration by two N atoms from 4,4′-dimethyl-2,2′ -bipyridine, one O atom from dimethyl sulfoxide and three Cl atoms. The In—Cl and In—N bond lengths and angles (Table 1) are within normal ranges, as in (XI), (XII), (XIII) and (XV).

In the crystal structure, intermolecular C-H···O hydrogen bonds (Table 2) link the molecules into centrosymmetric dimers (Fig. 2), in which they may be effective in the stabilization of the structure.

S2. Experimental

For the preparation of the title compound, (I), a solution of 4,4′-dimethyl -2,2′-bipyridine (0.20 g, 1.10 mmol) in methanol (10 ml) was added to a solution of InCl₃.4H₂O (0.16 g, 0.55 mmol) in methanol (5 ml) at room temperature. The suitable crystals for X-ray analysis were isolated after one week by methanol diffusion to a colorless solution in DMSO (yield; 0.19 g, 71.4%).

S3. Refinement

H atoms were positioned geometrically, with C-H = 0.93 and 0.96 Å for aromatic and methyl H, respectively, and constrained to ride on their parent atoms with U$_{iso}$(H) = 1.2U$_{eq}$(C).
Figure 1

The molecular structure of the title molecule, with the atom-numbering scheme. Displacement ellipsoids are drawn at the 40% probability level.
Figure 2

A partial packing diagram of the title compound. Hydrogen bonds are shown as dashed lines.

Refinement

Refinement on F^2	Secondary atom site location: difference Fourier map
Least-squares matrix: full	
$R[F^2 > 2\sigma(F^2)] = 0.036$	Hydrogen site location: inferred from neighbouring sites
$wR(F^2) = 0.085$	
$S = 1.16$	H-atom parameters constrained
5046 reflections	$w = 1/[\sigma^2(F_o^2) + (0.0263P)^2 + 2.6542P]$ where $P = (F_o^2 + 2F_c^2)/3$
201 parameters	
0 restraints	$(\Delta/\sigma)_{max} = 0.018$
Primary atom site location: structure-invariant direct methods	$\Delta\rho_{max} = 0.86$ e Å^{-3}
	$\Delta\rho_{min} = -0.69$ e Å^{-3}

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R-factor wR and goodness of fit S are based on F^2, conventional R-factors R are based on F, with F set to zero for negative F^2. The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R-factors(gt) *etc*. and is not relevant to the choice of reflections for refinement. R-factors based on F^2 are statistically about twice as large as those based on F, and R- factors based on ALL data will be even larger.
