Received 3 March 2012; accepted 28 March 2012

Key indicators: single-crystal X-ray study; $T = 298$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.032; wR factor = 0.084; data-to-parameter ratio = 16.5.

In the title compound, $[\text{Co}(\text{C}_{12}\text{H}_9\text{O}_2)_2(\text{C}_4\text{H}_6\text{N}_2)_2(\text{H}_2\text{O})_2]$, the Co^{II} ion is located on an inversion centre and displays a distorted octahedral coordination geometry. Two O atoms from two water molecules and two carboxylate O atoms from two 2-(naphthalen-1-yl)acetate ligands are in the equatorial plane and two N atoms from two 1-methyl-1*H*-imidazole ligands are in the axial positions. The structure is stabilized by intramolecular $\text{O}-\text{H}\cdots\text{O}$ hydrogen bonds. Intermolecular $\text{O}-\text{H}\cdots\text{O}$ hydrogen bonds link the complex molecules into chains along [100].

Diaquabis(1-methyl-1*H*-imidazole- κ N³)bis[2-(naphthalen-1-yl)acetato- κ O]cobalt(II)

Hong Zhao, Fu-Jun Yin, Xing-You Xu and Li-Jun Han

S1. Comment

In recent years 2-(naphthalen-1-yl)acetate ligand has attracted many interests in coordination chemistry due to its ability to form metal complexes (Duan *et al.*, 2007; Ji *et al.*, 2011; Tang *et al.*, 2006; Yang *et al.*, 2008; Yin *et al.*, 2011). The crystal structure of the title compound was determined as part of an ongoing study of the properties of cobalt complexes containing imidazole ligands.

In the title compound (Fig. 1), the Co^{II} ion is located on an inversion centre and displays a distorted octahedral coordination geometry. Two O atoms from two water molecules and two carboxylate O atoms from two 2-(naphthalen-1-yl)acetate ligands are in the equatorial plane and two N atoms from two N-methylimidazole ligands are in the axial positions. The structure is stabilized by intramolecular O—H \cdots O hydrogen bonds (Table 1). In the crystal, intermolecular O—H \cdots O hydrogen bonds link the complex molecules into chains along [100] (Fig. 2).

S2. Experimental

The title compound was synthesized by the reaction of CoCl₂·6H₂O (71.3 mg, 0.3 mmol), 2-(naphthalen-1-yl)acetic acid (93 mg, 0.5 mmol), N-methylimidazole (32.8 mg, 0.4 mmol) and NaOH (20 mg, 0.5 mmol) in 15 ml of a water-ethanol mixture (v/v 1:1) under solvothermal conditions. The starting mixture was homogenized and transferred into a sealed Teflon-lined bomb (25 ml) and heated at 140° C for three days. After cooling, red crystals of the title compound were obtained, which were washed with distilled water and absolute ethyl alcohol (yield: 26.8% based on Co).

S3. Refinement

H atoms attached to C atoms were placed in calculated positions and refined as riding atoms, with C—H = 0.93 (CH), 0.97 (CH₂) and 0.96 (CH₃) Å and with $U_{\text{iso}}(\text{H}) = 1.2(1.5 \text{ for methyl})U_{\text{eq}}(\text{C})$. The water H atoms were located in a difference Fourier map and refined with a restraint of O—H = 0.85 (1) Å and with $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{O})$.

**Figure 1**

Molecular structure of the title compound. Displacement ellipsoids are drawn at the 30% probability level. Hydrogen bonds are shown as dashed lines. [Symmetry code: (i) $-x+1, -y+1, -z.$]

**Figure 2**

Part of the chain structure of the title compound. Hydrogen bonds are shown as dashed lines. H atoms not involved in hydrogen bonds are omitted for clarity.

map
Hydrogen site location: inferred from
neighbouring sites
H atoms treated by a mixture of independent
and constrained refinement
 $w = 1/[\sigma^2(F_o^2) + (0.0408P)^2 + 0.3567P]$
where $P = (F_o^2 + 2F_c^2)/3$
 $(\Delta/\sigma)_{\max} < 0.001$
 $\Delta\rho_{\max} = 0.25 \text{ e } \text{\AA}^{-3}$
 $\Delta\rho_{\min} = -0.28 \text{ e } \text{\AA}^{-3}$

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R-factor wR and goodness of fit S are based on F^2 , conventional R-factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on F^2 are statistically about twice as large as those based on F , and R-factors based on ALL data will be even larger.
